# Setup Checklist

1. WiFi network 802.11 b/g/n @ 2.4 GHz with WPA- or WPA2-Personal security. If your WiFi network is 5 Ghz, please login to your router settings and turn on the 2.4 Ghz network.

2. "uHoo" app. Please make sure you have downloaded the latest version.

3. iOS 9 or later except for iOS 10.2.x

4. Power outlet.

Setting up a new uHoo - iOS

1. Connect your mobile phone to the same WiFi that you want your uHoo to connect to.

2. Download the "uHoo" app from the App Store.
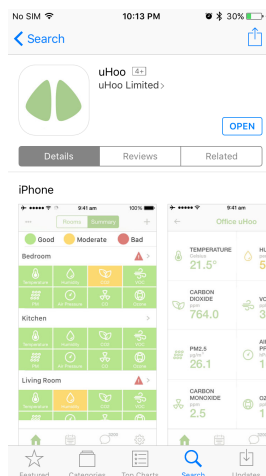

3. Login with your uHoo account. If you do not have a uHoo account, register for one by tapping on "Sign up". When you sign up for a new account, you would need to verify your account by clicking on the link that's sent to your email.

4. Login to your account.

5. Connect the uHoo device to any power outlet using the USB adapter and cable provided. The LED light at the bottom of the device will be **SOLID BLUE**. If you've left the device connected for more than 15 minutes prior to going to step 6, unplug the device and power it back on. This ensures that the WiFi network of the uHoo device will be available.

6. Tap the "+" button on the top-right corner.

"+" button
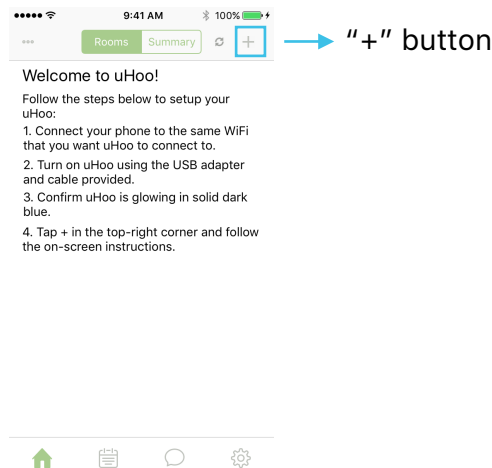

7. After confirming that your phone is connected to the WiFi network that you want your device to connect to, tap "Confirm". If you would like to connect your device to a different WiFi Network, tap "Cancel", go to the phone's Settings and choose your desired WiFi Network then repeat Step 7.

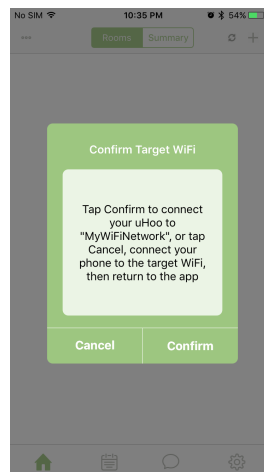

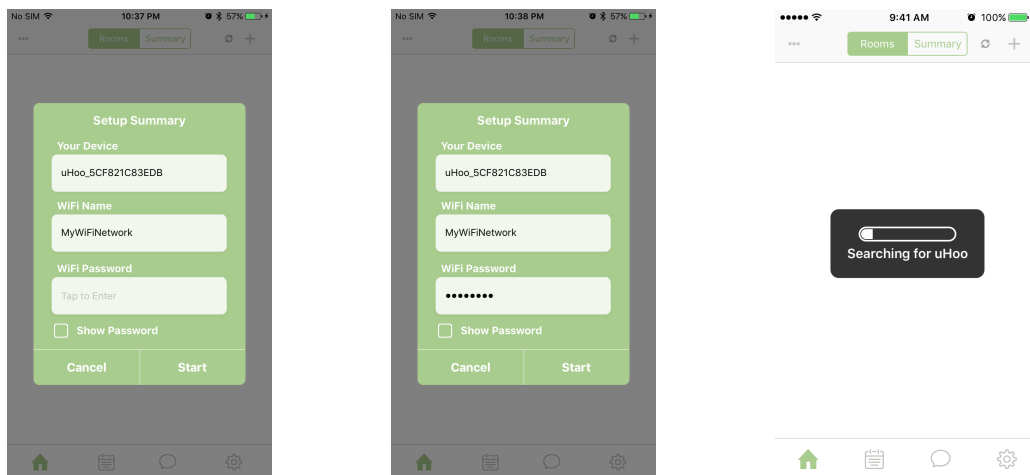

8. Exit the uHoo app, go to Settings > WiFi. Connect your phone to the WiFi network "uHoo_xxxxxxxxxxxx" (where x represents the 12-digit MAC address printed at the bottom of the uHoo device). If "uHoo_xxxxxxxxxxxx" could not be found, refresh the WiFi list or unplug the device and plug it back in. If it still doesn't appear, ensure that the light of the device is **SOLID BLUE** and you're using the USB cable and adapter provided in the box.
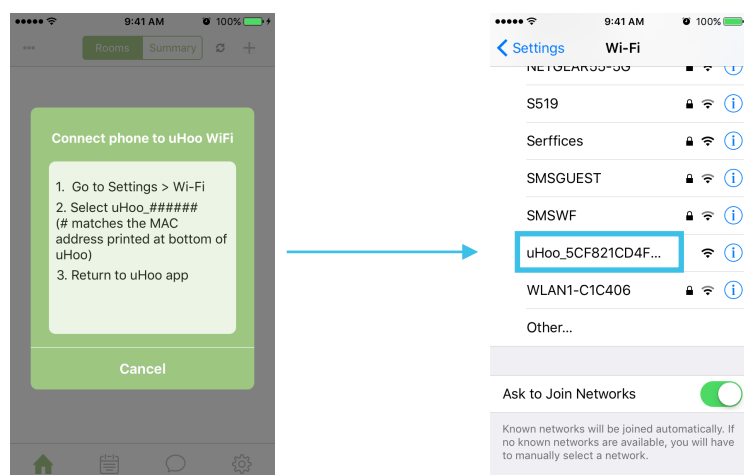

9. Once you see the blue tick mark on the left of "uHoo_xxxxxxxxxxxx", return to the uHoo app. Wait until your phone finishes connecting to uHoo, this will take 45 seconds.

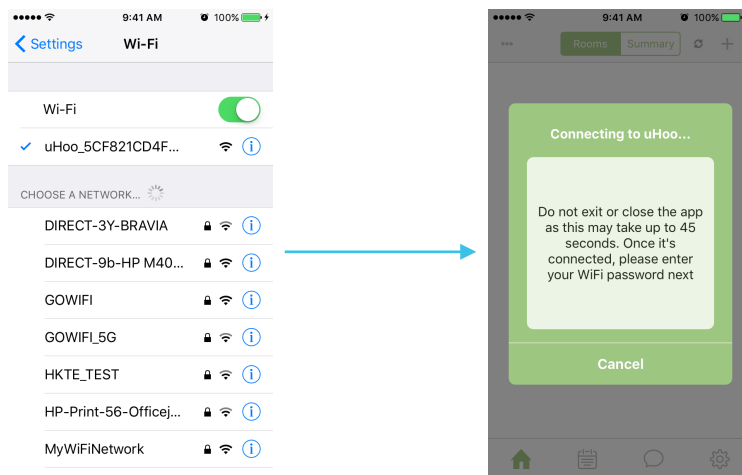

10. You will see your uHoo device name and WiFi SSID. Enter your WiFi password (if any) and tap "Start". **DO NOT** close the app. The app will start setup by searching for uHoo. Once uHoo is found, the LED light of uHoo will blink **GREEN** to indicate that it is now connecting to your WiFi network. Setting up uHoo is dependent on the speed of your internet connection. Once uHoo is connected to your WiFi the LED light will be **SOLID GREEN**.

11. If the WiFi has been successfully setup, you will see a message on the app saying "You have successfully set up your uHoo to connect to WiFi" and the uHoo device's LED light will cycle between **LIGHT BLUE** and **RED**, proceed to step 15.
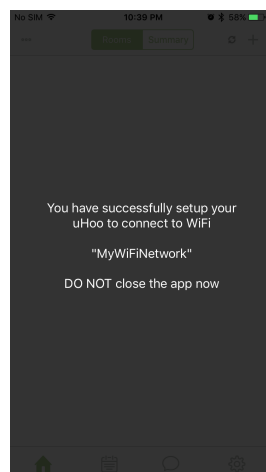

12. If the setup was not completed successfully, you will be given steps on what to do next. Read the message on the screen to understand the next steps and tap on "Ok".
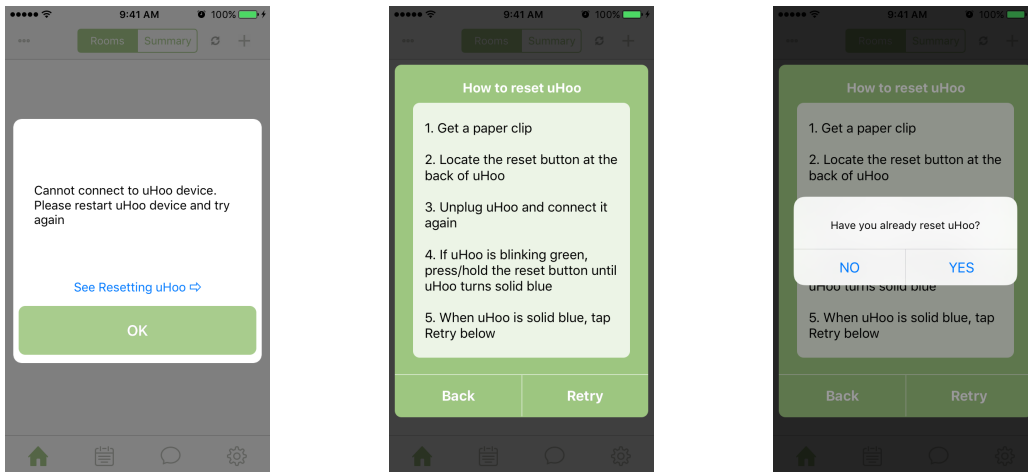

13. You may be asked to connect your phone to the uHoo WiFi again to confirm the setup status. Exit the uHoo app and go to Settings > WiFi. Connect your phone to the WiFi network "uHoo_xxxxxxxxxxxx" (where x represents the 12-digit MAC address printed on the white label at the bottom of uHoo device). If the "uHoo_xxxxxxxxxxxx" could not be found, refresh the WiFi list until it appears. Wait until your phone fully connects to the uHoo device. You need to see the blue tick mark on the left of the "uHoo_xxxxxxxxxxxx" WiFi network and the 📶 appear on the upper left of your phone for your phone to fully connect to the uHoo device.

14. Return to the uHoo app, you will see a message on the app saying "You have successfully setup your uHoo to connect to WiFi". The uHoo device's LED light will cycle between **LIGHT BLUE** and **RED**.
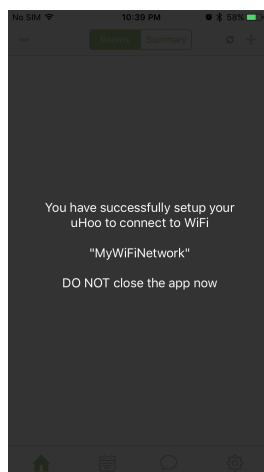

15. Fill in information about your uHoo. Tap "Save" to complete the registration process. Once the uHoo device has completed setup and added to your account, the uHoo device's LED light will **SWITCH OFF**. The uHoo app returns to the home page upon completion and you'll see your device on the home page.
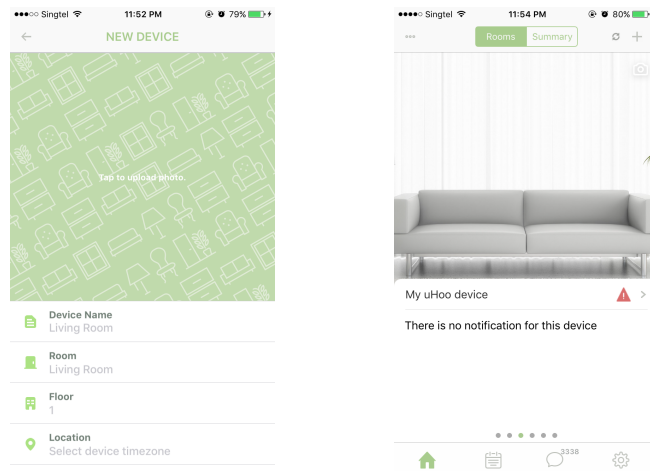

16. Wait for at least 1 minute then tap "Refresh" on the top-right corner of the app to refresh your app then tap on the name of your device to view your current indoor air quality data.

17. Enjoy!

Notes:

1. If you'd like to move uHoo to a different room within your home that uses the same WiFi network, just unplug uHoo and power it on in the other room. uHoo will automatically connect to your network. If it's taking time to automatically connect, make sure that the WiFi network is available then power it off and power it back on.

2. Please keep your device running for 48 hours continuously after first time setup. During the first time, the readings will be fluctuating to learn about your environment and calibrate. Your actual readings will only be available after 48 hours. Prior to that, the readings are based on what the device is learning about your indoor environment.

3. For more information on what the color of the LED on the device means, please view the "State of your uHoo" document in https://uhooair.com/setupguide

4. If your WiFi network is an enterprise network or a portal network, whitelist the MAC address of each uHoo device you own so you can connect uHoo to the network.
